ShopSmart Vision

1. Introduction

This document aims to enlighten the readers to the scope and purpose of our project, ShopSmart. We will touch upon the primary features and the problem our project solves.

The document uses the following acronyms: UI which stands for User Interface, Q&A which stands for Quality Assurance, HTML which stands for Hypertext Markup Language, CSS which stands for Cascading Style Sheets, HTTP which stands for Hypertext Transfer Protocol and RFC which stands for Requests For Comments (a standards mechanism of Internet Engineering Task Force).

The document has 5 sections.

1. Introduction, the part which entails the purpose and structure of this document.
2. Positioning, the part which entails the solution and the problem which concerns our project.
3. Stakeholder Description, the part where stakeholders and their needs/responsibilities are identified.
4. Product Overview, where the primary features of the project are mentioned.
5. Other Product Requirements, the part which entails other requirements such as applicable standards or performance requirements.

2. Positioning

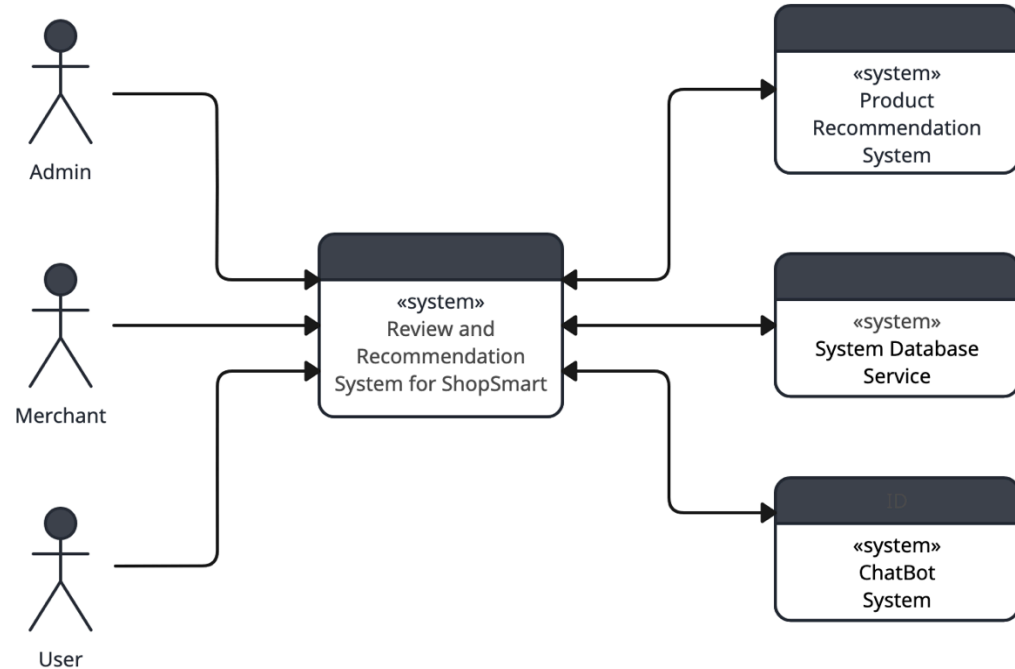

2.1 Problem Statement

The problem of	absence of e-commerce product information exchange
affects	the people who want to buy a product online
the impact of which is	lower product sales over the internet
a successful solution would	satisfy the people who shops online and increases sales

2.2 Product Position Statement

For	e-commerce shoppers
Who	needs insights about the products
The ShopSmart	is an e-commerce recommendation system
That	help the shoppers know more about a product they may want to buy
Unlike	Trendyol
Our product	includes expert reviews and doesn't sell the product directly so no purpose of profit from a product which leads to more genuine information

3. Stakeholder Descriptions

3.1 Stakeholder Summary

Name	Description	Responsibilities
Users	The primary users of the system are ShopSmart customers who browse products, read reviews, and receive personalized recommendations. There are also non-registered users which have limited capabilities.	- Submit reviews and ratings for products they have purchased. - Utilize product recommendations to discover new items and make informed purchasing decisions. - Interact with the system by browsing reviews and potentially upvoting/downvoting helpful reviews
Administrators	These are individuals within ShopSmart who manage the platform and oversee the RRSS.	- Monitor overall system performance and user feedback. - Handle escalated customer support issues - Ensure the system operates securely and maintains user privacy.
Merchants	ShopSmart's merchants are the businesses that promote products through the platform.	- Benefit from the increased customer engagement and informed purchasing decisions driven by the RRSS. Positive reviews can attract new customers and boost sales. - Address customer concerns and build trust.

ShopSmart	
Vision	Date: 2024/03/15

Name	Description	Responsibilities
		Be responsible for providing accurate product information and high-quality images to enhance customer experience.
Community Moderators	These individuals are responsible for maintaining a healthy and trustworthy review environment within the RRSS.	- Monitor community content for inappropriate content, spam, or fraudulent activity. - Uphold a positive and constructive environment for user interaction with reviews.
System Developers	This group is responsible for building, testing, and deploying the RRSS.	- Design and develop the user interface for a smooth and user-friendly experience. - Ensure data security and privacy measures are built into the system. - Continuously test and maintain the system for optimal performance. - Implement recommendation algorithms that personalize product suggestions for each user.

3.2 User Environment

Numbers of People Involved: ShopSmart serves two primary user groups: customers and merchants. The number of customers and merchants that engage with the platform could vary depending on different factors such as the overall popularity of the platform, the popularity of the products uploaded, the marketing and PR activities of the companies.

Task Cycle: The task cycle for customers involves browsing products, reading reviews, rating products and possibly engaging in discussions on the public forum. This cycle can vary in duration depending on factors such as the number of products viewed, the amount of time customers spent during the searching, and so on. For merchants, the task cycle includes uploading new products, managing inventory, and responding to customer reviews.

Environmental Constraints: ShopSmart works in an online internet environment accessible via web browsers. Customers can access the platform at home, at work or on the go. They can access the platform any time they have access to the internet.

System Platforms: The ShopSmart platform will be built as a web application accessible through popular web browsers such as Chrome, Firefox, and Safari.

Other Applications: Customers might use other social media platforms such as Instagram, Twitter etc. to share product recommendations with their friends. Additionally, with the integration of a chatbot powered with AI, ShopSmart can assist and help the customers during their experience of using the platform. This may require the integration of some AI models and other social media platforms technologies.

4. Product Overview

4.1 Needs and Features

Need	Priority	Features	Planned Release
Design files of the pages that will be implemented in the system.	High	UI Design	2 Weeks
Ensuring all parties in the system can create,manage and log into their accounts securely.	High	User Authentication	3 Weeks
Users viewing and adding comments for a product on discussion forums, also seeking advice from experts in the Q & A section, creating local communities by area and arranging meet-ups.	High	Community Module	4 Weeks
Product categorization by type, merchant, brand	Medium	Product Categorization	3 Weeks

The product will have these features in addition to the prioritized needs mentioned above:

- Product search
- Product recommendations
- Detailed product information
- Modifying order specifications
- Stock information of products
- Reward system for active users

5. Other Product Requirements

5.1 Applicable Standards

- This project must follow the Turkish Laws 6698 (Law of Protection of Private Data) and 5651 (Law of Regulation for Internet Broadcasts and Crimes). The project also aims to follow the General Data Protection Regulation (2016/679) mandated by the European Union.
- This project will follow RFCs 9112 (HTTP/1.1), 9113 (HTTP/2); HTML5 and CSS3 specifications.

5.2 System requirements

- This project requires a modern version of an internet browser (Mozilla Firefox, Google Chrome or Safari) that supports the HTML5 and CSS3 standards.

5.3 Performance requirements

- A computer with a clock speed of at least 1 gigahertz, 2 gigabytes of RAM, 500 megabytes of hard drive space and a recently updated operating system such as Windows 10, MacOS 10.15 or Linux is recommended.
- A broadband internet connection is recommended.

5.4 Environmental requirements

- None specified.
